Special Issue

Alkylation, Mutagenesis and Repair *edited by B. Singer*

Introduction

B. Singer (U.S.A.)

1

Research Papers

The early history of the biological alkylating agents, 1918-1968 P. Brookes (Great Britain)	3
The <i>E. coli</i> <i>ogg</i> gene G.P. Margison, D.P. Cooper and P.M. Potter (Great Britain)	15
Regulation of <i>O</i> ⁶ -methylguanine-DNA methyltransferase expression in the Burkitt's lymphoma cell line Raji P. Karan, C. Stephenson, S. Cairns-Smith and P. Macpherson (Great Britain)	23
Lack of sequence-specific removal of <i>N</i> -methylpurines from cellular DNA D.A. Scicchitano and P.C. Hanawalt (U.S.A.)	31
Molecular modeling studies of <i>O</i> ² -alkylthymines and <i>O</i> ⁴ -alkylthymines in DNA: Structures that may be pertinent to the incorporation of the corresponding dAlkTTP into DNA by DNA polymerases <i>in vitro</i> E.L. Loeschler (U.S.A.)	39
Site-directed mutagenesis for quantitation of base-base interactions at defined sites B. Singer and M.K. Dosanjh (U.S.A.)	45
Resistance to alkylation damage in <i>Escherichia coli</i> : Role of the Ada protein in induction of the adaptive response D.E. Shevell, B.M. Friedman and G.C. Walker (U.S.A.)	53
Physiological properties and repair of apurinic/apirimidinic sites and imidazole ring-opened guanines in DNA J. Laval, S. Boiteux and T.R. O'Connor (France)	73
Why do <i>O</i> ⁶ -alkylguanine and <i>O</i> ⁴ -alkylthymine miscode? The relationship between the structure of DNA containing <i>O</i> ⁶ -alkylguanine and <i>O</i> ⁴ -alkylthymine and the mutagenic properties of these bases P.F. Swann (Great Britain)	81
<i>N</i> -Methyl- <i>N'</i> -nitro- <i>N</i> -nitrosoguanidine induced DNA sequence alteration; non-random components in alkylation mutagenesis A.J.E. Gordon, P.A. Burns and B.W. Glickman (Canada)	95
Role of DNA methylation in the activation of proto-oncogenes and the induction of pulmonary neoplasia by nitrosamines S.A. Belinsky, T.R. Devereux and M.W. Anderson (U.S.A.)	105
DNA alkylation by the haloethylnitrosoureas: Nature of modifications produced and their enzymatic repair or removal D.B. Ludlum (U.S.A.)	117
Sequence-dependent formation of alkyl DNA adducts: A review of methods, results, and biological correlates F.C. Richardson and K.K. Richardson (U.S.A.)	127
The control of <i>O</i> ⁶ -methylguanine-DNA methyltransferase (MGMT) activity in mammalian cells: A pre-molecular view B.S. Strauss (U.S.A.)	139
Macromolecular adducts of ethylene oxide: a literature review and a time-course study on the formation of 7-(2-hydroxyethyl)guanine following exposures of rats by inhalation V.E. Walker, T.R. Fennell, J.A. Boucheron, N. Fedtke, F. Ciroussel and J.A. Swenberg (U.S.A., France)	151

Properties of mammalian O^6 -alkylguanine-DNA transferases	165
A.E. Pegg (U.S.A.)	
Mutagenesis by <i>N</i> -nitroso compounds: relationships to DNA adducts, DNA repair, and mutational efficiencies	177
J.B. Guttenplan (U.S.A.)	
Site-specifically alkylated oligodeoxynucleotides: Probes for mutagenesis, DNA repair and the structural effects of DNA damage	189
A.K. Basu and J.M. Essigmann (U.S.A.)	
Molecular dosimetry for sister-chromatid exchange induction and cytotoxicity by monofunctional and bifunctional alkylating agents	203
W.J. Bodell (U.S.A.)	
Induction of proteins involved in the repair of alkylated bases in mammalian cells by DNA-damaging agents	211
F. Laval (France)	
Antibodies to DNA alkylation adducts as analytical tools in chemical carcinogenesis	219
C.P. Wild (France)	
Alkylation damage, DNA repair and mutagenesis in human cells	235
V.M. Maher, J. Domoradzki, N.P. Bhattacharyya, T. Tsujimura, R.C. Corner and J.J. McCormick (U.S.A.)	
DNA alkylation damage: consequences and relevance to tumour production	247
J. Hall and R. Montesano (France)	
Properties of mer ⁻ HeLa cells sensitive or resistant to the cytotoxic effects of MNU; effects on DNA synthesis and of post treatment with caffeine	253
J.J. Roberts and C. Basham (Great Britain)	
Immunocytochemical analysis of <i>in vivo</i> DNA modification	265
L. den Engelse, J. van Benthem and E. Scherer (The Netherlands)	
<i>Contents, Vol. 233 (1990)</i>	289
<i>[end of special issue]</i>
